INFECTIVE DISEASES IN HOSPITAL

Ref. 68/08 En

Milan, 15/10/2008

Critical air and surface monitoring in operating theatres, immuno-depressed patient wards, newborn and high risk environments are fundamental to save patient's life.

International PBI presents the "SAS Hospital System" to control the air by the "[Duo-SAS-360](#)" air sampler and the surfaces by the "[Rodac Weight](#)" applicator.

Both the instruments have the purpose to check the microbial contamination is under suggested limits and the staff is well trained about the hygienic, cleaning and disinfection operations.

Application Notes [>>>](#) about the implementation of the system are available from International PBI (www.internationalpbi.com).
