

Press Release

THE FAMILY SAS

Ref. 60/08 En

Milan, 25/09/2008

- The "**SAS Family**" (Surface Air System) is the most complete set of microbiological air samplers on the worldwide market.
- It consists of 10 different instruments and more than 25 accessories to cover the needs of the microbiologists and environmentalists for air monitoring.
- The SAS from International PBI has been patented and received several international awards during the 30 years of its life.
- The most recent application is the network system where several units are connected via intranet and all the operations can be managed by a single standard PC.
- More than 100 Application Notes are presented into www.internationalpbi.it >>>

The "**SAS Super Network**"
is a complete system for performing sequential and/or simultaneous microbiological air sampling
with multiple "**SAS Super ISO**" units positioned at different locations within a clean room.
